

Calling all Community Health Centers

Join APCA's CHC Contact Tracing Effort

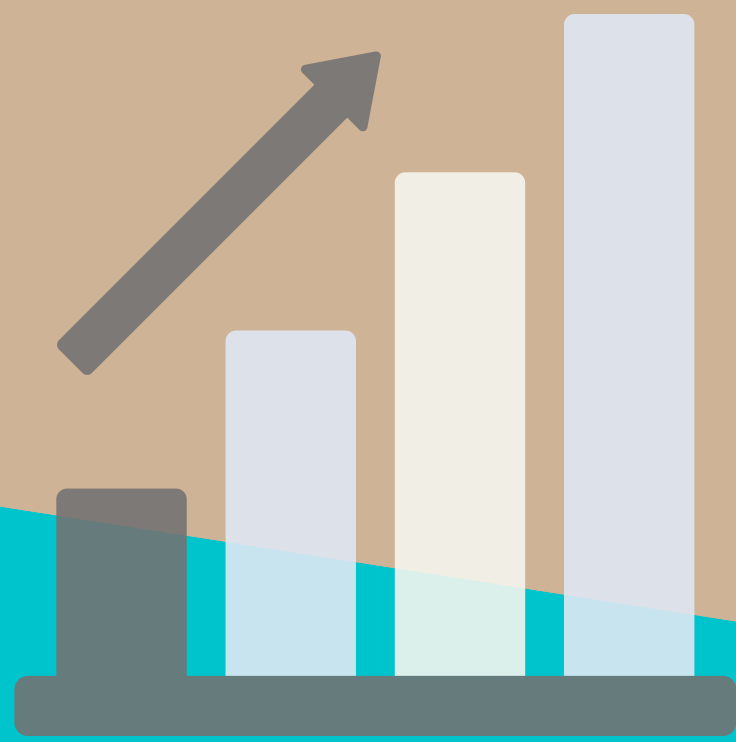

Alaska Primary Care
ASSOCIATION

Project Overview:

APCA is working with the State of Alaska to contract and coordinate a Community Health Center Contact Tracing Program.

The goal of this program is to increase the contact tracing workforce and increase distribution of contact tracers in Alaska.

CHCs will be reimbursed for training and contact tracing. Invoices will be sent to APCA monthly for reimbursement.

Why Community Health Centers?

- CHCs are an important player in the public health infrastructure of our state
- CHCs have unique, local knowledge of their own communities
- Cases in the community/region of the Community Health Center will be prioritized
